Content

Brief	Explanation
ENIGMA	ENIGMA provided 1431 novel variant interpretations.
Genetics Diagnostic Laboratory, Children's Hospital of Eastern Ontario (CHEO)	CHEO provided novel interpretations for 79 variants and updates to 917 existing variant interpretations.
HudsonAlpha	HudsonAlpha, part of the CSER consortium, provided ten novel interpreted variants.
Coming soon - ClinVar will adopt the new HGVS standard for variants that are intronic or outside the UTRs	HGVS standard states that "the reference sequence used must contain the residue(s) described to be changed." Therefore "a coding DNA reference sequence does not contain intron or 5' and 3' gene flanking sequences and can therefore not be used as a reference to describe variants in introns and up/down-stream of the gene." ClinVar is working to adopt this standard so we encourage our submitters and users to start describing these variants on genomic sequence instead. http://varnomen.hgvs.org/recommendations/general/ http://varnomen.hgvs.org/bg-material/numbering/
Coming soon - all submissions through Submission Portal	Soon we will direct all submissions through the Submission Portal: https://submit.ncbi.nlm.nih.gov/clinvar/ If you submit to ClinVar, or plan to submit, please register your organization in the portal now so that we are prepared to accept your submissions through the portal.

XML file updated for month/year	The initial XML file released had the wrong date; it was updated 6:00pm EDT 11/03/16. If you downloaded the file before then, you may wish to download again.
VCF file to be updated	The VCF file released on 11/3/16 lacks some tags for KGPhase3 (1000 Genome phase 3). The file will be updated shortly with this data.
