use of MANE transcripts for preferred names for variants in ClinVar	We calculate a preferred name for each variant in ClinVar, often using a RefSeq transcript as the reference sequence. We are in the process of preferentially using transcripts from the MANE project in the preferred name. For more information about MANE transcripts, read this NCBI blog post: https://ncbiinsights.ncbi.nlm.nih.gov/2019/03/12/mane-select-v0-5/ and RefSeq's documentation: https://www.ncbi.nlm.nih.gov/refseq/MANE/
missing data for GRCh37 to be restored	The VCF files for GRCh37 posted at 10/2/19 ~10:15 am are missing some data for GRCh37 and for mitochondrial variants, as in last week's release. We are generating corrected files and will post them in a few hours. UPDATE: Updated VCF files were posted at 10/3/19, 5:55 pm. We have restored most of the missing data; more fixes will be in place for next week's release.
