

# 20150108\_data\_release\_notes

## Overview of changes in the release of January 8, 2015

### Overview of submissions: 2015

Date	Total Submissions
Jan 01, 2015	149013

## Content

Brief	Explanation
Updated SO id for synonymous variants	In October 2014, ClinVar updated the SO term used for synonymous variants from SO:0001588 to SO:0001819.
Coming soon	ClinVar will alter the representation of some types of HGVS expressions: Novel submissions may already be reported according to this standard, but the comprehensive revision will not be reported until the January release. <ul style="list-style-type: none"><li>• HGVS expressions without an accession and version will be reported as "HGVS, incomplete" rather than as "nucleotide change"</li><li>• protein HGVS expressions based on legacy numbering systems are curated as "HGVS, legacy"</li></ul>
SequenceLocation element in the XML	ClinVar will modify data reported in the SequenceLocation element to include representation of position according to the VCF standard, in addition to HGVS-based positions. These updates will happen incrementally, according to variant type. Attributes display_start and display_stop we added to clarify which positions are reported on the web interface.
