## Content

Brief	Explanation
Removal of large datasets without variant interpretation	Two large datasets of variants associated with a phenotype but without variant interpretation were removed from ClinVar. All the variants remain available in dbSNP, and BioSample records have been created to represent the phenotypes associated with the variants.
Update from University of Chicago	Genetic Services Laboratory at University of Chicago provided updated interpretations for 31 variants.
GeneDx	GeneDx submitted interpretations for variants in genes related to arrhythmia, cardiomyopathy, and thoracic aortic aneurysms, as well as for variants in TTN.
PediSeq - CHOP	The PediSeq project at Children's Hospital of Philadelphia, part of the CSER consortium, submitted interpretations for 72 variants.
Mendelics	Mendelics submitted interpretations for 43 variants.
