Chapter 1. Installing the openvswitch Roll

1.1. Adding the Roll

The openvswitch Roll must be installed during the Frontend installation step of your cluster (refer to section 1.2 of the Rocks usersguide). Future releases will allow the installation of the openvswitch Roll onto a running system.

The openvswitch Roll is added to a Frontend installation in exactly the same manner as the required HPC Roll. Specifically, after the HPC Roll is added the installer will once again ask if you have a Roll (see below). Select 'Yes' and insert the openvswitch Roll.

Chapter 2. Using the openvswitch Roll

2.1. Using the openvswitch Roll

Tutorials for using openvswitch and its components are available from the openvswitch web site[1]
